
SmartContent charts not displaying properly

Posted by kefford - 2016/10/25 14:42

Hi,

I am using the ARISmartContent on my home page to present some examples of the data managed on my site. Recently, the ARISmartContent charts stopped presenting properly. Please see the link below,

<https://sim-x.net>

The content displays as a raw table rather than a chart as the module is configured. Any idea why?

The only new thing done with the site is to install and configure JCHOptimize to speed up the loading of the site pages. Everything worked fine after configuring the optimizer for well over a week and yesterday the SmartContent charts began displaying as raw tables.

Thanks in advance.

Ken

Hello,

A javascript error occurs on the page. You can see it in browser's error console. It seems the error occurs in a combined javascript file which is created by JCHOptimize extension.

Regards,
ARI Soft

Thank you. I can see the error. I have contacted the folks who make JCHOptimize.
