deprecated constructor

Posted by gdsd - 2016/11/29 11:43

_____

Hi,

I got a warning message in the administrator dashboard. The plugin still works, I just wanted to let you know about it.

Deprecated: Methods with the same name as their class will not be constructors in a future version of PHP; plgContentAridatatables has a deprecated constructor in /plugins/content/aridatatables/aridatatables.php on line 19

_____

Hello,

Download and update the plugin.

Regards,
ARI Soft

_____

Thank you.

I installed the newest available version (1.15.13) and after clearing the cache the message did not appear again.

 :)

_____

Hello,

I get still get the same message :

Deprecated: Methods with the same name as their class will not be constructors in a future version of PHP; plgContentAridatatables has a deprecated constructor in /Users/claytoncavaness/Public/WEBSITES/lomancovents/plugins/content/aridatatables/aridatatables.php on line 19

in the administrator dashboard after upgrading to version 1.15.13 but only when I enable the Content-ARI Data Tables Plugin. When I disable the Content plugin it goes away but I require the plugin to show my tables.

The plugin still works on the site fine. I only see the message on the administrator dashboard. Correction I do see the same message on the site at the bottom of the pages using the plugin

Is there anything I might do to fix this?

Running:
Joomla 3.6.4
PHP 7.0.12

Thank you for your time and knowledge.

_____

Hello,

Download the latest version of the extension in "Member Area" on our site and update the plugin. It should help.

Regards,
ARI Soft

_____

I download and installed Today's version from the "Member Area". All seems to be working with no errors or messages.

Thank you for taking care of this so fast. You are greatly appreciated!
