
No data available.

Posted by rgfuchs - 2016/12/19 12:31

Hi,
Just migrated to the latest Joomla 3.6.5 and PHP 7.014 and Ari Data table 1.15.13 and now get the following message:
No data available.
All other configurations have been kept and I double checked the pages and database connection, all seems fine.
Any idea what else to look for?
Thanks,
Robert

Hello,

Could you provide a link to a page where the problem occurs and a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft

Like the original poster, I just updated to Joomla 3.6.5 and updated Ari Data Tables to 1.15.13. When I update any of the modules, I get the message "No data available" on the frontend. This only happens on modules that have been re-saved. Also, I am unable to change the "Path to CSV file" whatever changes I enter it reverts to the previous setting after saving. Is there anything I can do. (I am working on a local network so I would be unable to provide backend access if needed.)

Hello,

Check that "System - ARI Extensions" plugin is enabled and v. 1.3.2 is installed.

Regards,
ARI Soft

Yes, v. 1.3.2 is installed and active. After a bit of testing, it appears I have an conflict with another extension. After removing the other extension, my data table modules are saving and displaying correctly again.
