Issues with Searching table with Mailto Link
Posted by rphill - 2017/01/29 17:15

_____

I have an issue when a mailto link (Email) is included in the column data, the search and sort field no longer works.

http://subassoc-dev.dpw-solutions.co.uk/index.php/branches/association-database

The tab the Members column has email address linked created through the SQL.

The other tabs and are working as expected.

I am using version 1.15.13

_____

Hello,

Could you provide the SQL query which is used to retrieve data?

Regards,
ARI Soft

_____

The SQL command is (as not all members have an email address) :

SELECT if(`MAIL` "", concat("", `Member`,""), `Member`) as Member, `Rank/Rate`, `Medals`, `Branch`, `Submarine Service` FROM `Current`

I have also tried

SELECT concat("", `Member`,"") as Member, `Rank/Rate`, `Medals`, `Branch`, `Submarine Service` FROM `Current`

_____

The extension doesn't support complex computed columns when "Server side pagination" is used. Possible solution is creating a view based on your query and use a simple query into the module to retrieve data from the view.

Regards,
ARI Soft

_____

Thanks for the response. The issue has been fixed by creating a View.

I can also confirm that turning off Server Side Pagination also fixed the issue however the page load time was unacceptable.
