
Strange behavior -- cache problem ?

Posted by adolcini - 2017/01/31 11:56

Strange behavior.

I spent a couple of mornings, but I can't understand this strange behavior...

in the home page the module works fine in all other pages lose any kind of configuration parameter..

I tried to delete any kind of cache, I changed browser but always same problem...

same module active in the same position in all pages....but different behavior

any ideas ?

Thanks

Hello,

Could you provide a link to a page where the problem occurs?

you have to scroll down for the home page

any other link different behavior

It looks like a problem with a 3rd party extension. All javascript code which is added via Joomla! API is removed on the

page.

Hi I installed the Ari Tables in different page where it seems that works fine but it seems that does not accept the settings.

I set align center but some column are aligned in center other coloumn are left aligned. Furthermore I set "open the link (download) in a blank page" but doesn't work

<http://www.carbotermo.com/cv.html>

user: aritables

pwd: aritables123

any ideas ?

Many thanks

Hello,

If you use "Columns settings -> Format" parameter to create links then define target="_blank" attribute directly in tag to open links into new window.

About align problem, could you specify column name(s) where values are aligned incorrectly.
