## list documents under article

Posted by ponygirl - 2017/04/15 10:56

---

Hi

Hopefully a simple question regarding the module

I want to show a list of documents under the selected article which is selected via a menu item

The data table module is then shown in the left position showing the documents in that selected category.

For example when uploading documents a user has to select the article id they belong to so say article id 13

There are many articles and documents... is there a way to only create the one module and have the query use a WHERE articleid-ofdoc = \$articleid ????

Thanks for any help

Hello,

You can try to use "id" request variable (link to an article looks like index.php?option=com\_content&view=article&id=ARTICLE\_ID). Query will look like:

```
SELECT
id,
title
FROM
#__content
WHERE
({$REQUEST:id|empty:''} " AND id = {$REQUEST:id|empty:''})
```

Thank you

would this be able to work with SEF's ?

ie /article123 rather than the long url

:)

It should work because SEF URL is translated to a plain URL.
