Cascading Selection Form

_____

Is there a way to create a cascading selection form to display selected records using Ari Data Tables?

For example, if I have a table with the fields Item, Color, Size, could I have a form that selects Item A, then another field to select the color, and then it would display all of the sizes for Item A in that color?

Is there another extension that could work with Ari Data Tables or can this be done with existing Joomla forms?

If either of those cases, can you refer me to a tutorial or instructions on how?

Hello,

Sorry, but we don't have an extension which supports the described functionality.

Regards,
ARI Soft
