
Problem with ariimageslider.ini

Posted by NickyBelane - 2014/04/16 06:19

Hy,
I have same problem with ariimageslider.ini. This is the file:

```
01-web-design.jpg="Realizzazione siti Web"  
02-seo.jpg="SEO"  
03-restyling.jpg="Restyling"
```

```
01-web-design.jpg="http://www.marcowebdesigner.it/realizzazione-siti-web.html"  
02-seo.jpg="http://www.marcowebdesigner.it/ottimizzazione-seo.html"  
03-restyling.jpg="http://www.marcowebdesigner.it/restyling-siti-web.html"
```

```
01-web-design.jpg="Realizzazione siti Web"  
02-seo.jpg="SEO"  
03-restyling.jpg="Restyling"
```

The file is in the folder images/slider-site and in this folder there are the files 01-web-design.jpg, 02-seo.jpg and 03-restyling.jpg.

In Slides parameters i have the value "images/slider-site" in the field "Image path".

The images of the slider does not have alt and description attribute and the link don't work.

Otherwise, the slider work very well.

This is the URL of my site:

<http://www.marcowebdesigner.it/>

Thanks in advance

=====

Hello,

You use modified version of "ARI Image Slider". We can recommend to download "ARI Image Slider" from our site and install it.

Regarsd,
ARI Soft

Hello,
I have installed the module from your site and now it works perfectly. Thank you very much. Best regards
