ARI Image slider not displaying images

Posted by bryce16 - 2014/05/09 02:02

_____

Hello,

I've installed the ARI Image Slider on my Joomla site. The slider appears at the top of the homepage, but I can't figure out how to get the images to show up.

Here are some of the settings I have selected:

Image path: /images/home/slides/077A.JPG
Description file: ariimageslider.ini
Include jQuery: Yes
Load jQuery Method: Local Copy
jQuery version: 1.10.1
jQuery noConflict: Yes
Load method: On Load

I have also tried adjusting all of the jQuery settings, but haven't had any luck with that. Not sure what to try next.

Thanks in advance for any advice you can give!

_____

Hello,

This problem with "twitter" module which you use. It doesn't use jQuery copy which is loaded by Joomla! and it causes javascript errors.

Regards,
ARI Soft
