## Multiple slider in the same page... inside tabs

Posted by maleli - 2014/06/06 13:18

---

Hi, I have placed 5 different sliders on one page.

Four of them are displayed inside tabs. The one outside of the tabs works great.

The others are sometimes shown and sometimes not.

When I click on a different tab and go back to the last tab that showed a slider, it sometimes won't show it for a second time.

I've tried loading jquery and not loading jquery with same results.

Here's my link:

Hello,

The module doesn't work in hidden area.

Regards,  
ARI Soft
