
SRI slider suddenly can't work

Posted by bnm hk - 2014/10/09 04:03

Here is my working site:

<http://bnm hk.ihost.tw/index.php/en/>

I put the images in the "sampledata" folder

It works well before, but suddenly can't work.

Would any one can tell me how to settle it?

Thanks,
BNM

Hello,

This problem with videobox extension. It loads own copy of jQuery library instead of loading it via Joomla! API.

Thanks for the reply, I disabled the video box, yet, the photo in slide show all in very low resolution --" the original photo (before I used the video box), are very clear.

May I know which setting I got wrong? and How can I set back to original?

Many many thanks.

Thumbnails are used into the slider. Check "Use thumbnails", "Thumbnail width" and "Thumbnail height" parameters in module settings.
