
Error Message: \"JFolder: :files: Path is not a...\"

Posted by grtk - 2014/10/17 11:38

Hi Community:

I work with Ari Image Slider, have 3 Moduls in my Website. It is a multilanguage site; 4 languages. Slideshow works SUPER, but I have the Error Message: "JFolder: :files: Path is not a folder. Path: serverfolder/Joomla/MyCMS"

-Should I create a Modul for every language? and new ariimageslider INI Files?

Can somebody please help me?????

Thank you.

Hello,

If you want to show images from different folders for each language then it requires create new module instances. If you want to show images from the same folder(s) for each language then it is possible to use own INI file for each language and use one module instance.

Regards,

ARI Soft

Thank you. Could you tell me please; how can I do it?

Only Description File (Parameter): ariimageslide.ru-RU.ini /Wenn Russian active language?

Make the Modul automatically a new INI File?

Thank you.

The extension doesn't create INI file. It tries to load specific INI file for the active language on frontend part of a site. For example if language code is ru_RU, the extension will try to load data from ariimageslider.ru-RU.ini. If the files doesn't exist then the extension will try to load data from ariimageslider.ini file.

Regards,

ARI Soft

Re:Error Message: \"JFolder: :files: Path is not a...\"

Posted by grtk - 2014/10/21 10:18

Thank you. I have tried some possibilities but I took the wrong way; 1 Modul for each language and in the "Description File" the right name but it dont works.

I want to show images of the same Folder for each language:

How can I create the files for example:

ariimageslider.ru-RU.ini

ariimageslider.en-GB.ini

ariimageslider.de-DE.ini
ariimageslider.es-ES.ini

I can't find the original file: 'ariimageslider.ini', where is it?

What should I script when I create the variation for the languages? Where can I find theorie about it? Could you please help me?
Thanks.

Re:Error Message: \"JFolder: :files: Path is not a...\"

Link to a sample INI file and information how to use it are available in "Description" section on module settings page.

The extension doesn't create INI files. It only uses them. You can create INI file in any text editor. You can create it based on the sample INI file.

Regards,
ARI Soft

Re:Error Message: \"JFolder: :files: Path is not a...\"

Posted by grtk - 2014/10/23 11:13

Thank you:

I have created 4 INI Files for each language. The module works but I still have the ERROR SYNTAX: "JFolder::files:Path is not a . . ."

INI Files content:

Bild-One.jpg="CommentOne"
Bild-Two.jpg="CommentTwo"

Bild-One.jpg="CommentOne"
Bild-Two.jpg="CommentTwo"

The INI Files are saved as: (In the same Folder where the images are: bilds)

ariimageslider.ru-RU.ini
ariimageslider.en-GB.ini
ariimageslider.de-DE.ini
ariimageslider.es-ES.ini

some Parameters:

Support Multi-Language-Description: YES
Description File: ARIIMAGESLIDER.INI
Image Path: images/bilds

What am I missing?

Best Regards.

Remove empty lines from "Image path" parameter. If it doesn't help, provide a link to a page where the problem occurs and a temporary access to your J! backend by email so we can investigate the problem.

Re:Error Message: \"JFolder: :files: Path is not a...\"

Posted by grtk - 2014/10/26 21:21

Ok. Sorry but how can I remove empty lines from "Image path" parameter? Could you send me please the command ? ?
?

Sorry I cannot give you an acces to the site because (as you see in the link) other people decide if i may.

Regards

Open module settings page, find "Image path" parameter and remove all empty lines from it.
