Links to Multiple Slideshows

Posted by wiggam - 2014/10/30 01:21

Hi AriSoft,

Is there a way of being able to list many slideshows with (relative/absolute) text based URL links (eg. >100) and by clicking on the text link, a Slider pops up?
ie. Ideal navigation to bring up a specific slider.

Alternatively a tree navigation system with subdirectories may be more efficient...

Would this be best accomplished using a separate directory for each slider or how else to separate such a large number of groups of images?

Thanks alot,

Wiggam

Hello,

The module shows images from selected folder(s). It doesn't support ability to show folders tree.

Thanks alot for clarifying.

An alternative, is there a way I can link via a URL click to a specific slider? I could generate a static text based list linking to individual sliders?, Much like a site navigation page?

You can load different module instances into different articles and create menu items for the articles with "ARI Image Slider" module instances.
