
bold or lettertype in description .ini file

Posted by Hadena - 2014/11/01 20:30

Hi,
I am using the .ini file (saved as UDF-8) to add descriptions to the pictures. It works, well :) after I figured out that i needed " " to use a special character like a "!", or a text between brackets.

However, is it somehow possible to make part of the description in bold or change the lettertype/size?
Thanks!

Hello,

You can use HTML code into description. For example:

image.jpg="This bold text"
