
Slider unable to load images on Joomla 2.5.26

Posted by mpiprojects - 2014/11/11 09:32

Hello.

The slider worked fine, up until some time ago. I can't figure out what changed. At least, I don't recall changing anything that could effect the slider.

Most of the time it is unable to load images. I just get a black field with a loading image that never stops. Sometimes when I refresh the page it starts working.

www.lastminute-zonvakantie.com/portugal

It doesnt seem to be because of Joomla or Gantry version. Tested the slider on another site of mine it works great with the same version and settings.

What can I do to fix this?

Thanks in advance!

Regards, Emiel.

Hello,

Try to set "Load Method" parameter to "DOM Ready" value in module settings.

Regards,

ARI Soft

Thx for your lightning fast response.

I think that did it. :-)

Many thanks!

Hi.

Please i am finding it difficult to load images from directory. Any help please?

"Configure main module parameters, specify relative path to images in 'Image path' parameter. Place each path to image folder on new line in 'Image path' textarea. Joomla! root directory will be used as root path for this folders. It means that if you want to show images from /images/slides folder, type in 'Image path' parameter the following value images/slides. Set 'Scan subfolders' parameter to 'Yes', if you want to include images from subfolders to image slideshow."

Hello,

In what folder(s) on your server images are located?

Hi,

My images are located in the folder "images/slides/" of the Joomla directory. I have for images by name "banner1.jpg" "banner2.jpg" "banner3.jpg" and "banner4.jpg".
Thanks very much.

Set "Image path" parameter in module settings to the following value:

images/slides
