How do you update the component?

Posted by mitchel - 2015/02/13 22:52

_____

It appears our problems with not resizing on a mobile device has to do with the fact we have an old version: 1.6.15

Do I just download the new version and install it or do I need to do something first?

I want to make sure I don't delete the current Slide Show.

Thanks!

Mitch

_____

Hello,

Download the latest version of the module and install it via standard Joomla! installation page. The installer does all required updated.

Regards,
ARI Soft
