ari image slider and fancybox plugin
Posted by flos - 2015/03/09 12:10

_____

Hello

I have a ari image slider which works great. Now I wanted to add the popup function with ari fancybox. I bought the plugion and installed the 'System - ARI Fancybox' plugin. In the module I have chosen the ARI Fancybox on the dropdown Lightbox integration.
Unfortunately there is no popup function. Am I missing something?

regards
Florian

_____

Hello,

Check that "ARI Fancybox" module is installed and "System - ARI Fancybox" plugin is installed, enabled and configured. If it doesn't help, could you send screenshot(s) of "ARI Image Slider" module settings page and a link to a page where the slider is used by email?

Regards,
ARI Soft

Great thanks a lot.
- Can I uninstall ari fancybox module or is it necessary?
- Can I put bigger pictures in the folder so that the sliders keeps the same dimensions and the popups are bigger?
- What about the responsive version. there is a white spce in the popup on smal screen and there is an wrapper space as well.

_____

1. The module can be disabled, but don't uninstall it because it contains files which are used by the plugin.

2. Yes, it is possible. The extension can also generate thumbnails automatically. For this enter a path to big images in "Image path" parameter, set "Use thumbnails" parameter to "Yes" and specify "Thumbnail width" and/or "Thumbnail height" parameters. If you want to use your own thumbnails then enter path to thumbnails in "Thumbnails path" parameter. For example if big images are located in images/album folder and thumbnails are located in images/album/thumbs folder and have the same name as big images then set "Thumbnails path" parameter to thumbs/{$fileName} value.

3. The slider looks fine for us when browser's window is resized. Could you provide an image where we can see the problem?

Regards,
ARI Soft

_____

It is a conflict with site template styles. Add the following CSS rule to a site template CSS file (for example to /templates/immooffice/css/template.css file) and clean browser's cache:

#fancybox-img {max-width:none;height:inherit!important;}

_____

Add also the following CSS rule:

#fancybox-wrap, #fancybox-wrap *{max-width: none!important;}

Regards,
ARI Soft

_____

ok thanks, but now the image does not get smaller in mobile devices.
it's not responsive anymore. sent you a screenshot.

_____

Set "Auto scale" parameter to "Yes" in "System - ARI Fancybox" plugin settings.

Hello

I have exactly the same problems. Module ARI Fancybox and plugin System - ARI Fancybox are installed and enable but
popup dont work. I tried to make configuration by myself, but without sucsess. I can't understand what I am doing
wrong... I sent screenshots of "ARI Image Slider" module settings page and a link to a page where the slider is used to
your E-mail.

regards
Dmitry

_____

Hello,

The email does't contain parameters for "thumbnails" section (screenshot 1 and 3 are the same), but try to set "Disable
original image" parameter to "No".

Regards,
ARI Soft

Sorry, but I can't find parameter "Disable original image" in image slider or fancybox plugin.
Sent new screenshots of slider module and fancybox plugin to your Email.
Maybe I must make configuration in Fancybox module too?
Thank you.

_____

Hello,

It is fixed in "ARI Image Slider" v. 2.1.13.

Regards,
ARI Soft
