
Very slow loading

Posted by Webwilson - 2015/03/19 17:44

Hello, once it gets going it seems to be a great product, but for some reason and I am not sure what I am doing wrong but it takes ages to load.

my site is <http://www.vintageteapartychinahire.co.uk> I have reduced the images to 36k, so not that large, but it take ages to load on the first visit.

Hope you can help John.

Hello,

What browser do you use? We checked it in FireFox on your site and the slider works fine.

Hello, I have tried it on Yahoo, Google and Bing as well as different PCs, notebooks and mobiles, so I would not have thought that it was browser based. So did you not get the grey box with a whirly arrow in the middle while the first picture loaded ?

Regards John.

A loading icon appears for a half of second while the first image is loading.

PS: Set "Load method" parameter to "DOM Ready" to initialize the slider as soon as possible.
