Width x Height

Posted by carosouza - 2010/07/17 15:24

_____

Hello, I'm testing the module and my images are 640x480px, and I'm setting up to 500x350px, but is not running, any suggestions? And this is a great module, congratulations!. Carlos.

_____

Hello,

Could you provide link to page where we can see this issue or could you provide your images and module settings by email that we can investigate this issue?

Regards,
ARI Soft

_____

Hello,

Sample INI file you can find by the following path:

/modules/mod_ariimageslider/ariimageslider.csv

In section place image file name and title for image in the following format: =. Where is image file name and is image title. In section place image file name and link for image in the following format: =. Where is image file name and is image title. If you use non-english characters in INI file, save this file in UTF-8 encoding. After this copy INI file to folder with images.

Regards,
ARI Soft

_____

If you have any difficulties, provide images which you want to load into the slider, INI file(s) and screenshot of the module

settings page by email that we can install it on our demo server and help you.

Regards,
ARI Soft

_____

Hello, I'm using the file so ariimageslider.ini:

=

correct?
but does not work

==

Re:Width x Height
Posted by admin - 2010/07/18 19:17

_____

Hello,

It's incorrect. Use the following:

01.JPG=Areias Coloridas em Morro Branco

Regards,
ARI Soft

_____

Hello..
First of all, thanks for your great module, as this will be my important part of my website.
But I am facing problem with ariimageslider.ini, can't work as per your guide.my site is http://sui.co.id/
I already sent you the email to provide the screen shoot of module parameter and setting of .INI file.

Thank you,
Utha

_____

Hello,

Do you copy this INI file to image folder? In you case this file should be located in the next folder:

/images/Slide

Regards,
ARI Soft

_____

Hello

Thanks for quick response...
already followed your instruction, but having error message
"Warning: parse_ini_file() has been disabled for security reasons in
/home/sloki/user/k7228188/sites/sui.co.id/www/modules/mod_ariimageslider/mod_ariimageslider/kernel/Utils/class.AppUti
ls.php on line 31"

Please advise..

Many thanks for your big help.

Re:Width x Height
Posted by admin - 2010/07/24 08:22
_____

Your hosting provider is disabled parse_ini_file() PHP function. The module uses this function that parse INI files.
Contact hosting provide and ask the reason why they are disable this function.

Regards,
ARI Soft

_____

Hello..
Problem solved..do not use "!" in description image, as this will not be shown. After delete "!" from the description, everything goes well...Thanks for the support...

Re:Width x Height
Posted by admin - 2010/07/26 08:56

_____

Hello,

"!" character can be used in INI file, only quote message with '"' symbols. For example:

image_01.jpg="This is beautiful waterfall!"

It isn't an issue, this is INI file format requirements.

_____

Thanks!

I suggest that the airimagesslider that is included with the package be modified to include the " "
The sample ini file reads l
modules/mod_ariimageslider/ariimageslider.ini

The example reads as follows. For your next update I suggest you include the quotes.

bread.jpg=This is a bread
coffee.jpg=A cup of coffee

coffee.jpg=http://www.google.com
