Hello,

Send a link to a page where the problem occurs.

Regards,
ARI Soft

This problem with site template or 3rd party plugin which is used to optimise loading of javascript files. It combines all javascript files in one file, but it contains the following incorrect code:

header('Expires: Sun, 09 Aug 2015 05:34:34 GMT');header('Last-Modified: Fri, 10 Jul 2015 05:34:34 GMT');header('Cache-Control: Public');header('Vary: Accept-Encoding');?>

Regards,
ARI Soft

I have this code in my head.php file

/ include JavaScript

```
$this->API->addJSFragment("\n".' $GKMenu = { height:'.($this->API->get('menu_height','0') == 1 ? 'true' : 'false') .',
width:'.($this->API->get('menu_width','0') == 1 ? 'true' : 'false') .', duration: '.($this->API->get('menu_duration', '500')).' };');

$this->API->addJS($this->API->URLtemplate() . '/js/gk.menu.js');
$this->API->addJSFragment( "\n".'$GK_TMPL_URL = "' . $this->API->URLtemplate() . '";'."\n" );
$this->API->addJSFragment( "\n".'$GK_URL = "' . $this->API->URLbase() . '";'."\n" );

if($this->API->get("css_prefixer", '0')) {
 $this->API->addJS($this->API->URLtemplate() . '/js/prefixfree.js');
}

if($this->API->get('css_compression', '0') == 1 || $this->API->get('css_cache', '0') == 1) {
 $this->cache->registerCache();
}

if($this->API->get('js_compression', '0') == 1 ) {
 $this->cache->registerJSCompression();
}
```

Open template settings page and disable cache (optimizing) of javascript files. You can contact site template developers for more details.
