## Where I can Specify image dimensions?

Posted by dsalchow - 2015/08/07 08:11

---

Hi,

I got following message

The following image(s) are missing width and/or height attributes.

Can please some let me know where I can set this information in the module?

I am using J. 3.4.3 with the latest version of ARI Image Slider

Thank you very much

Dirk

Hello,

Where you get this message?

Regards,

Specify image dimensions

Specifying a width and height for all images allows for faster rendering by eliminating the need for unnecessary reflows and repaints.

PageSpeed: Specify image dimensions

Page Speed currently only detects image dimensions that are specified via the image attributes. If you are specifying the dimensions via CSS, then you can safely ignore this recommendation.  
Details from Google

When the browser lays out the page, it needs to be able to flow around replaceable elements such as images. It can begin to render a page even before images are downloaded, provided that it knows the dimensions to wrap non-replaceable elements around. If no dimensions are specified in the containing document, or if the dimensions specified don't match those of the actual images, the browser will require a reflow and repaint once the images are downloaded. To prevent reflows, specify the width and height of all images, either in the HTML tag, or in CSS.

Thank you very much

If you want to change HTML code which is generated by the extension, see  
[/modules/mod\\_ariimageslider/tmpl/default.php](#) template file.
