
Change full width height

Posted by crispuchita - 2015/09/23 09:11

Hi guys,

I have a question, I'm using your slider on my joomla website, and i love the full width mode.
But I will like to change the height from 600px to 400px. It's just a bit to big for the page.
Could you be so kind to help me change that please ?

Thanks in advance,

Cristina

Hello,

When "Responsive" parameter is enabled, the extension calculates "Width" and "Height" parameter automatically saving aspect ratio of images. If want to use fixed values for "Width" and "Height" parameters, set "Responsive" parameter to "No".

Regards,
ARI Soft
