PageSpeed penalizes ARI Image Slideshow

Posted by LukeDouglas - 2015/11/20 06:42

_____

When analyzing a website with the ARI Image Slideshow enabled, the site is penalized due to the width and height properties not being set in the HTML code.

The following image(s) are missing width and/or height attributes.

Only 2 of multiple images:
http://wiregrasscourier.com/images/modules/header/slideshow/atlanta.jpg (Dimensions: 290 x 114)
http://wiregrasscourier.com/images/modules/header/slideshow/atlanta2.jpg (Dimensions: 290 x 114)

I have set the width to 290px and the height to 114px as well as added the CSS Styles "width:290px;height:114px;". This didn't help.

Is there anyway you can update this module to actually set the HTML code for "width='290' height='114'" (depending on the values entered into the module settings) so PageSpeed recognizes the width and height?

Thanks.

_____

Hello,

Upgrade "ARI Image Slider" to v. 2.2.0. It should help.

Regards,
ARI Soft

_____

It doesn't show an 'ARI Image Slider' update in the updates page and I've cleared the cache before checking for updates.

_____

The latest version can be downloaded here. Use 'Download the latest version of "ARI Image Slider" module for Joomla! 3.x.' link.
