Height is not working, Responsive=NO

Posted by jerker.klang@isil.se - 2016/05/09 10:04

I have a slider with a couple of images most of them are 340px in Height but one is 370. I have sett the heigt parameter to 340 and Responsive to No and thought that the slider should crop the images to 340. Insted the slider set the module in the Template to 340 but the background to 370. (element.style height: 373). The effect of this is that the module underneath the slider places under the slider "background".

You can see this on http://hprod.shinedata.se

Hello,

Add the following code to "CSS Styles" parameter:

{$id}_wrapper {overflow:hidden;}

Regards,
ARI Soft
