Thumbnails and Resizing

Posted by rmgross1 - 2010/10/12 01:58

_____

I have a couple of questions:

1) Is there a way to get rid of the thumbnail display?
2) Is there a way to tell it to re-size the images and/or completely overlay the previous one? When a smaller image is displayed, the previous larger one isn't deleted completely before the smaller one is shown.

Thanks for any help anyone can give me.

_____

Hello,

1. Set 'Use thumbnails' parameter to 'No'.

2. The module works properly with image which have the same size. It's limitation of Nivo Slider jQuery plugins which is used by the module.

I have set "Use Thumbnails" to "No," but I see little dots below the main image instead of the thumbnails. Is there any way to get rid of those? On the other hand, if Image Slider can't handle images of different sizes, I'm going to have to find something else anyway... Thanks!

_____

Could you provide link to page where we can see the issue and screenshot with module settings?

Well, I just found the option that I needed to turn off the dots below the main image. But the fact that it doesn't re-size the images is still an issue. I don't suppose anything can be done about that?

_____

Regarding to our previous post, it would be easier find the reason of the problem if you provide link to page where we

can see the module and screenshot of module settings page.

Okay. This is what I'm talking about -- see the lower right-hand corner of the page. You'll see that when a smaller image overlays a larger one, the larger one still shows beneath the smaller one because the smaller one isn't re-sized to completely cover the container area (or rather, the container isn't re-sized to fit the image). Similar problem with vertical vs. horizontal pictures.

It seems another slider is used on your site. In any case, we wrote in our previous post that NivoSlider doesn't support images with different size. Transition effects doesn't look well in this case.
