
Site menu module behind ARI Carusel module

Posted by aspiridou - 2012/07/11 16:41

Hi, My problem is that i can not point on a submenu item, because ARI Carusel stays at the front and a image gets big. My site is panossavas-jewelry.com. Take a look at menu item Collections, Submenu Crosses, when ARI carousel is running (go at submenu Rings first). Any idea for solving this problem.

PS the module is fantastic

I also have this problem.

I'm trying css "hack", couse I think the problem is the z-index: 100, which is too much, and the floating menu will not be able to rise... B)

Hello,

This problem with the menu, add the next CSS rule to a site template CSS file:

```
#nav ul ul, .moduletable-superfish ul li:hover ul {  
    left: 10px;  
    top: 24px;  
    z-index: 1000;  
}
```

Regards,
ARI Soft

I have the same problem but I cant fix this. I used this in my template.css , I used a template name Motion - Clean Corporate Template for Joomla!

```
#nav ul ul, .moduletable-superfish ul li: hover ul {  
    left: 10px;  
    top: 24px;  
    z-index: 1000;  
}
```

But its no work.

I use mega menu not superfish in my web.

How can I fix this ?

Please help me with this.

I use joomla 1.7.3, ARI Cloud Carousel the last version.

Thanks in advance

Add the next CSS rule:

```
body #ja-slideshow  
{  
    z-index: 1;  
    position: relative;  
}
```
