
menu switches back to the startposition

Posted by TenakaKhan - 2012/09/10 08:38

Hello..I use Cloudcarousel as a menu..

My Problem is, that the menu and the content are at the same site..

Now, when i click on a menubutton, then the correct site is shown, but

the menu switch back in the start-position, so i have the problem that..the menu-point doesn't match with the site, which is shown..

Where can i find the parameter which are responsible for this behaviour??

=====

Hello,

Do you want to set start index for the carousel?

wow, thanks for the quick reply..

yes, and when i cclick on an menu-button, i want that the menu stay by this menupoint and don't switch back to the startposition..

you can see it at the side..www.hiyou.at

Start index can be defined in module settings with help of "Initial slide index" parameter. If you want to populate start index automatically based on carousel item which is selected, it requires custom modification of the extension.

You can store index of last selected carousel item in cookies. It requires to modify
\modules\mod_aricloudcarousel\mod_aricloudcarousel\js\jquery.cloud-carousel.min.js javascript file. We can send
original version of the file by email.
