
TypeError InputExclusion

Posted by mlane - 2012/11/17 21:20

Hello,

I am just starting a site build and have run into a general snag. I was using the ARI Carousel plugin for the last 4 or 5 days. It was displaying fine and used on most all of my pages with no trouble. Today, I have done something to stop it from displaying. I am getting a TypeError in the console that says.

InputsExclusion.push('.content_vote','#rt-popup','#rt-popuplogin','#vmMainPage') is not a function.

I can't seem to find anything about it on the web. I did add a small codeset to the main Gantry template in order to enable Squeezebox. The code is pasted below and was in the header originally. I have removed it from the main template and cleared all caches, but still no luck.

The site URL is www.thesacredprint.com

Any thoughts?

Here is the code that was added to the template header.

Hello,

Add ; symbol after InputsExclusion.push('.content_vote','#rt-popup','#rt-popuplogin','#vmMainPage') code.

Thank you for the quick response. That is a very simple fix. Sorry for the newb question, but I can't find that line of code anywhere. Any ideas on where to start looking?

Thanks again for the help. There really doesn't seem to be much online about this.

Try to see header.php file in site template folder or a sub-folder.

Sorry just found it. There is an "Input Styling" in the template manager under the "Advanced" tab. It doesn't seem to

give me the ability to place the semi-colon after it, but if I disable that feature, the carousel comes back up.

Thanks for the help!
