ARI Cloud Carousel and Joomla 3
Posted by jk15060 - 2013/03/22 19:39
_____

I am about to tear my hair out trying to get this module to work in Joomla 3.0. So in my frustration, I configured the module on a Joomla 2.5.9 site and it took me minutes to configure.

Hours later, I'm still trying to get 7 little ole images to display in ARI Cloud Carousel.

Website: http://www.joomlawebdesignnc.com

Credentials
UID: letmein
Pwd: r0yGbiv2013

Main Menu item called Our Projects should have the module within the article, just like I did on my Joomla 2.5.9 site.

Hope someone can help me figure out what I'm doing wrong. I have compared the module in both versions of Joomla and cannot for the life of me figure out why it's not being displayed.

The Joomla 2.5.9 site: http://www.myjoomlasandbox.com/ari-cloud-carousel.html

Weird.

Hello,

This problem with extension which adds the following incorrect CSS rules:

.li-banner .caption_title{font-size:

You can see it if open HTML source of the page.

Regards,
ARI Soft

I'm sorry, but I do not understand what you're referring to in your reply. Are you saying the template is the cause of the problem? If so, how can I resolve this?

I can view source on the Home Page, where I've tried using loadposition as well, but not sure what you're telling me. Sorry to be so thick.

We suppose this code is added by a 3rd party extension. See the screenshot of HTML source of the page below:

_____

Good morning!
Would you please take a peek at the link again and tell me why the Cloud Carousel isn't displayed properly? I determined that there were a couple "addons" in Firefox that were inserting the extraneous code into the site. I have since disabled those addons and have updated a few other extensions in Joomla in hopes of making Cloud Carousel work on this site.

I have the module configured to its own position and am using {loadposition kbprojects} in an article.

I'm much closer than I was previously, but still not quite there.

I'd really like to get this working for my client if at all possible.

Thank you for your help.

Disregard my plea for help! Got ARI Cloud Carousel working! On my other test site, I used the Core Joomla Lightbox without any problems. But on this Joomla 3.0.x site it wouldn't work.

Once I changed the setting to ARI Sexy Lightbox, everything began working as expected.

Love it!!

I guess I do have one last question. If I don't want the message displayed that says "System - ARI Sexy Lightbox plugin not installed", would that be the $12 extension listed on your website? I added it to my cart, but saw that it was a module and I'm needing the plugin. I think that is a yes, but wanted to verify.

Thank you again! I love it when things work.

As for credentials, I have found issues when trying to copy/paste, but if you enter in the uid/pwd manually you can get into see the site.

_____

If you want to integrate "ARI Sexy Lightbox" with "ARI Cloud Carousel", it requires "System - ARI Sexy Lightbox" plugin from ARI Sexy Lightbox package. If you don't want to use the lightbox with the carousel, set "Lightbox integration" parameter to "None" in module settings.

What browser do you use? The carousel is shown fine in FireFox for us:
