
Help to build carousel

Posted by Nayeh - 2013/05/18 06:10

I am very new to Joomla! and building websites and I'm doing this for free for a guy who really needs some help, and all I wanted was a similar carousel for his website that's on the demo site.

Is there anyone who can post me the HTML that they use on their demo site or something similar?

At the moment mine looks totally rubbish and I haven't got the expertise to make it much better.

Any help is appreciated!

Hello,

Install the module (you read how to install an extension here) and find instructions how to use the module in "Description" section on module settings page.

Thanks - I installed it no problem but I can't see it in Module Manager. It appears in Extension Manager but I can't get to the setting page for it from there.

What am I missing? :unsure:

It should be available in "Module Manager". We can investigate the problem if you provide a temporary access to your J! backend by email.

Thanks it's working now.

But I have another problem that I can't get the images to link to webpages.

I.e. instead of opening a larger menu I want it to go to a link.

I've changed the .ini file to show this:

```
Events.jpg="Events"  
Accommodation.jpg="Stay with us"  
Shop.jpg="Browse and Buy"  
About.jpg="Learn more about Biodynamics"
```

```
Events.jpg="Events"  
Accommodation.jpg="Accommodation"  
Shop.jpg="Browse and Buy"  
About.jpg="Learn more about Biodynamics"
```

```
Events.jpg="http://mypage/events.html"  
Accommodation.jpg="http://mypage/accommodation.html"  
Shop.jpg="http://mypage/wines-main.html"  
About.jpg="http://mypage/about/the-beginnings.html"
```

But I don't know where to tell it to use the links.

This code should be located in INI file which should be in folder with images. A link to a sample INI file can be found in "Description" section on module settings page.
