
Off-site link

Posted by ricm - 2013/08/04 14:03

I have used the carousel here:

<http://morte-family.co.uk/index.php/family-tree>

It's nothing more than a visual space filler. It would be nice if a double-click on the carousel would take the user to a specific URL (a single click bringing that image to the fore).

Is there a parameter I can set to do this? (I've looked and the only options available are to enable the link to each individual image or to SexyLightBox (if enabled)).

Just a long shot....

Thanks,
Ric

Hello,

It is possible to attach links to carousel images in INI file. It is also possible to open the link only for front image (for this set "Bring to front" parameter to "Yes" in module settings). The extension doesn't open links by double click.
