Image does not come to front on click

First , thank you for the great extension.

Question... Am I correct that when you click on an image in the carousel it should rotate to the front BEFORE opening in lightbox. I ask because when I click an image it opens in lightbox, but thumb does not rotate to front/center.

Hello,

The carousel moves to selected image and open it into a lightbox when integration with a lightbox is used.

Regards,
ARI Soft

That is what I am saying is that my install the carousel is NOT moving to the selected image. The image does open in a lightbox, but the carousel does not move to that image when it is selected.
Not a drastic problem, but if you have idea on how to fix would be appreciated.

Brian
