## mouse over image in carousel

Posted by ZAJDAN - 2014/04/11 08:00

---

hello,  
just I am trying create js function which will show, hide, and so on some div

usually I use selector like this:

```
$('#acc_146.ari-cloud-carousel > div.ari-cloud-carousel-iwrapper > img.cloudcarousel:nth-child(1)').mouseover( function()  
{ alert("welcome"); }  
);
```

and it works

but in another one carousel where I use links from ini file is one element more "a"

ok...I try:

```
$('#acc_95.ari-cloud-carousel > div.ari-cloud-carousel-iwrapper > a.cloudcarousel:nth-child(1) > img.cloudcarousel:nth-child(1)').mouseover( function()  
{ alert("welcome"); }  
);
```

doesn't works

=====

Hello,

You can use a browser's console or add-on like FireBug for FireFox browser to debug your custom code.

I take them back ...it was my mistake and now it work...  
something else what I am trying now:

```
if ($('#acc_95.ari-cloud-carousel > div.ari-cloud-carousel-iwrapper > a > img.active').attr('src') == '/images/01/01_Z.png')  
{  
  $('#G-text').hide("slide");  
  $('#Z-text').show("slide");  
  $('#testing').hide("slide");  
};
```

I want to say, that if image in carousel will get status/class active and has attribut which equal some path then show, hide a few div's, but so far I can not get it works

=====

We can recommend to debug your code to find an error.

done...  
if (\$('#acc\_95.ari-cloud-carousel > div.ari-cloud-carousel-iwrapper > a.active > img.cloudcarousel.active').attr('src') ==  
'/images/01/02.png')  
{  
alert ('TEST')  
}

now is problem that the condition is performed just after load page....will be needed the script modify to some event  
handler which carousel do....

please can you say me what event handler is it when carousel rotates?

thank You

---

The carousel doesn't trigger any event for rotation.

ok...I will check them via function with setInterval ...it is not ecologic :\_), but when you will suggest me something cleverer  
I will be glad
