Cannot get ini file to work
Posted by chccsit - 2014/09/16 02:12
_____

Hi there,

I have set up my aricloudcarousel.ini file into images/onsite where the list of the images for the carousel are. I have put in the three sections in my ini file as per your other forum replies but I still cannot seem to get anything come up when I mouse over the image as title or description.

In the module settings i have left the decription file setting as aricloudcarousel.ini and I have also changed it to images/onsite/aricloudcarousel.ini but I still cannot get it to work.

I have attached the file structure of the site as well as the ini file contents. I have also attached a screenshot of the module settings.

Any help would be appreciated.

thanks
Darren http://www.ari-soft.com/images/fbfiles/files/screenshot2.zip

Hello,

"Description file" parameter should contain only file name without folder and sub-folders.

Provide a link to a page where we can see the problem.

Regards,
ARI Soft

Hi there,

the website is devel.coffscoastadventurecentre.com.au and the if you click on activities and then onsite activities, the carousel is there.

Also is there a way to move the carousel up a bit as there is quite a bit of white space above it.

thanks
Darren

Yep sorry about that. I have added the MIME type so that you should now see the ini file.

File names are case-sensitive. For example Archery.jpg and archery.jpg are two different files. Fix files names in INI file.
