
Images aren't displaying

Posted by 3speranz - 2014/10/30 17:39

Greetings. I am testing out the free version before getting the responsive pro version.

See <http://www.companylogodesign.us>

The thumbnails aren't loading. I read the documentation and tried various settings/paths to no avail. I attempted to attach a jpg of the settings as they stand now but first the kb, then the width, then the height were too much. So I don't have much to show you now and I have to run but I'll break up the images later, edit this post and submit them.

The path of the images is
image/phocagallery/candadian-logos

Hello,

Set "Load jQuery method" parameter to "Local copy" value in module settings.

Regards,
ARI Soft

Wow. That did it. Thank you! I have purchased the pro version, happy to see that I can just install it on top of the free one and it worked great.

Can you take another peak and tell me if I can stop the shaking of the thumbs?

thanks!
