## when/how items get class .active ?

Posted by ZAJDAN - 2015/01/09 08:43

---

Hello,

I observe, that item in carousel which is on front get class .active and mainly when is sent to front automatically(autorotate) or via navigation arrows, but I can not find out if is it via mouse wheel rotate also.

my goal is show/hide text according to the picture that is on the front:

```
function checkRotate() {  
  
if ($('#acc_95.ari-cloud-carousel > div.ari-cloud-carousel-iwrapper > a.active > img.cloudcarousel.active').attr('src') ==  
'/images/cabinets-de/01_GE.png')  
{  
    $('#G-text').show("slide");  
    $('#Z-text').hide("slide");  
    $('#testing').hide("slide");  
    $('#acc_95.ari-cloud-carousel > div.ari-cloud-carousel-iwrapper > a:nth-child(1) > img.cloudcarousel').css({opacity:1 });  
    $('#acc_95.ari-cloud-carousel > div.ari-cloud-carousel-iwrapper > a:nth-child(2) > img.cloudcarousel').css({opacity:0.7});  
    $('#acc_95.ari-cloud-carousel > div.ari-cloud-carousel-iwrapper > a:nth-child(3) > img.cloudcarousel').css({opacity:0.7});  
}  
  
if ($('#acc_95.ari-cloud-carousel > div.ari-cloud-carousel-iwrapper > a.active > img.cloudcarousel.active').attr('src') ==  
'/images/cabinets-de/02_Z_I10.png')  
{  
    $('#G-text').hide("slide");  
    $('#Z-text').show("slide");  
    $('#testing').hide("slide");  
    $('#acc_95.ari-cloud-carousel > div.ari-cloud-carousel-iwrapper > a:nth-child(1) > img.cloudcarousel').css({opacity:0.7});  
    $('#acc_95.ari-cloud-carousel > div.ari-cloud-carousel-iwrapper > a:nth-child(2) > img.cloudcarousel').css({opacity:1});  
    $('#acc_95.ari-cloud-carousel > div.ari-cloud-carousel-iwrapper > a:nth-child(3) > img.cloudcarousel').css({opacity:0.7});  
}  
}  
setInterval(checkRotate,800);  
*/
```

this works fine when the picture is sent to front via navigation arrows or via auto rotate, but via mouse wheel not.

Hello,

"active" class is set for a front image. It doesn't depend on action which causes images rotation, the class will be set for front image in any case.

Regards,  
ARI Soft

aha ...the problem will be probably, that when I rotate via mouse wheel, so the picture is not exactly in the middle and doesn't get class .active
