Image Positioning
Posted by Savage - 2011/05/10 14:00
_____

Hi, I am new to Joomla and also new to discovering Ari-Soft products.
I have been browsing your products and will be making purchases such as Smart Content, when all modules are made compatible with Joomla 1.6.

For the moment I am experimenting with Slick Gallery.

My question is....... in your demo, all of the image thumbnails always appear in the same position on loading the module. All nicely spaced out. If they are moved and the page reloaded, they always return to their original position.
On my site the thumbnails always appear randomly spaced out, sometimes nicely, sometimes not (all bunched together).

How did you achieve this?

Thanks

S

(ps. do you realise that the rotation effect does not work with IE8?

Hello,

Rotation doesn't work in IE 8 because it doesn't support CSS3. On demo site images are shown in the same position because cache is used. In other case the module uses random position for image each time.

PS: Currently "ARI Smart Content" is not compatible with Joomla! 1.6, but new version (2.0) will support Joomla! 1.6. It will be ready soon.

Regards,
ARI Soft
