
Subfolders

Posted by Bilchez - 2011/04/14 07:28

Hi,

I have just installed ARI Orbit Slider in my local website. Is it possible to have different visors for different groups of photos? Because now, I can only see all photos in the same visor. The idea, would be to have a menu selecting the group of photos and then show only this group of photos in ARI Orbit Slider.

Thank you very much in advance,
Jose

Hello,

Joomla! supports ability to create as many module instance as you wish. Read about it [here](#).

PS: You can create new module instance for each photo group.

Regards,
ARI Soft
