## Set background image

Posted by glr - 2011/04/29 20:06

---

Hello again,

I like very much the module and would like to know how to make a few changes:

Is there a way to set a background image for the module that displays an image below the module?

Explaining a bit, I would like to put an image of a shadow (25px high) below the images shown by the module. I think I can do that setting it on the CSS but I can't find the way.

Thanks so much for the patient!

Best regards.

Hello,

Sorry for delay. Could you provide sample screenshot where we can see what you want to achieve?

Hi! I would like to have an effect like the one on Piecemaker

<http://www.modularweb.net/#/en/piecemaker>

Attached is the image I'll like to use

Thanks very much.

Best regards. [http://www.ari-soft.com/images/fbfiles/files/simple\\_bg.zip](http://www.ari-soft.com/images/fbfiles/files/simple_bg.zip)

You can modify module template file. It is located by the next path:

`\modules\mod_ariorbitslider\tmpl\default.php`

For example you can wrap slider with `tag` and add background with shadow for this element with help custom CSS rules.

PS: FireBug addon for Firefox browser can be used that investigate page HTML layout and styles and play with styles on runtime.
