Desidered function: mixed transitions

Posted by glr - 2011/05/05 17:16

Hello, it will be fine to have an option on the transitions set to mix the types in random way, so to have each image transition differnet from previous.

It is considerable?

Thanks in advance.

Download and upgrade the module. New version provides ability to set "Transition effect" parameter to "Random" value. In this case the extension will select transition effect randomly for each slide.
