Page doesn\'t continue?
Posted by Pethol - 2011/03/10 14:47

I can get around this by making several articles with a limit of 2000 characters each, but I thought that "truncating" would automatically split an article after a set amount of chars, and show the rest of the article on the next page.

Maybe it's just a setting I missed out on? (again) :)

"truncate" filter keeps only specified count of symbols, it doesn't split content into several pages.

Okay. Is there a way to split an article into several pages? It would be awesome for writing and publishing books. Each chapter(of several pages) could then be one article. That would make one category of articles a full book.

I would pay for such an upgrade, although I'm VERY happy with this one.

You can submit feature request here and we will implement this ability in a future release. Specify please is it suitable if {pageseparator} tag is used in articles that split article into several pages and show them in flip book?

The {pageseperator} is, of course, an option. I now use
This enables people to scroll down to see the rest of the text, but doesn't give the "feel" of a real book. It's good enough for a Blog though.

The {pageseperator} option in the sense of a book, would still require a good deal of manual work in experimenting with how many lines are needed for each page. Although easier than making one article for each, I think it is worth it to wait for an automated function.

I'll put a suggestion in the "feature request"-section, and then sit at the edge of the chair, while staring at the monitor and reload the page until the message "upgrade" comes up. lol. A feature worth waiting for.
