
How to apply additional CSS styles

Posted by aibbett - 2011/11/28 22:47

Good morning all, I am using flipbook with a home built template created using artisteer, by default the content text is white. so when I publish this story to the flipbook I get white on white - not good. I have been looking for an example as to how I create a new style in the extension and apply this new style to the text displayed.
Any pointers would be appreciated.

thanks
Alan

Hello,

Could you provide a link to a page where we can see flip book on your site?

Regards,
ARI Soft
