## Book Module Not Displaying

Posted by Brealey - 2012/05/29 16:35

---

Hi,

I have installed the module and plug-in on a Joomla 1.5 install and i either get a completely blank page (no course code!) in the browser or i get the {ariflipbook moduleId="21"} displayed on the page instead - you get a random result depending on screen/browser refresh. :blink:

The test link is here:

[http://www.redboxgraphicdesign.co.uk/shadow/index.php?option=com\\_content&view=article&id=3&Itemid=3](http://www.redboxgraphicdesign.co.uk/shadow/index.php?option=com_content&view=article&id=3&Itemid=3)

Your help is appreciated.

Kind Regards

=====

Hello,

Plugin code is:

```
{ariflipbookÂ moduleId="21"}
```

Replace Â with a space. For this switch your WYSIWYG editor to plain text mode and remove Â

Thanks but that doesn't work. Now I have nothing displayed in the browser and no source code for the page in question either. :S

If you take another look you'll see what I mean.

---

Try to set "Excluded articles" parameter to 3 in module settings.
