Problem of ties
Posted by nogent - 2012/11/21 12:47

Hello,
I have just installed on my site the last version of FLIP BOOK.
I have some articles with pictures on which I put a tie toward another site and it doesn't function in FLIP BOOK.
If me click on the picture, I go to the following or previous page.
I also have two pages or I bound the plugin JCE MEDIABOX to pictures so that they enlarge in pop-up and it only functions on the last page.
Can tell me to you what I can make to settle these problems

here is the page: http://www.dj-musicien.com/photossites/conception-sites-internet-creations-graphiques-pascal-revellin.html

Hello,

Set "Overlay links" to "No" in module settings.

Regards,
ARI Soft

Thank you very much for your fast answer.
I have make the modification and it functions very well.
Thank you in core and bravo for your work.
Cordially.
