FlipBook doesn\'t work properly

Posted by jwm - 2013/05/24 12:42

Hi Guys:

It appears that your Flip Book doesn't like my J 2.5.11 site's environment. I can get it to work with one article on the first page but no matter what I try it throws the following error if I try to add a second article as page two:

Fatal error: Allowed memory size of XXXXX

I've played with it for almost two days, off and on, one setting at a time and can't get it to work. I've looked at most of the Posts on the forum and can't find a solution.

It looked promising but it is taking too long to get it to function. Perhaps if there was a good Users Manual it would be a good extension.

Unfortunately, I'm trying it on a proprietary system not connected to the Internet so y'all can't be of much assistance.

I just don't have the time to spend nursing this along.

==========

Hello,

Read this post.

Regards,
ARI Soft
