Flip Book not Arranging Articles in Pages

Posted by nissilaws - 2013/07/04 22:32

I am trying to use the flip book in a module position. I have created several articles in a particular category, and then listed the ID's of the articles I want to display, separated by commas. Unfortunately, the flip book is displaying on the articles in a single spread and extending beyond the boundaries of the flip book. There is no pagination created whatsoever, even though I selected "Yes" for show pages.

Is there anything I am doing wrong?

Thanks for the support.

Hello,

Could you send screenshot(s) of module settings page and a link to a page where we can see the problem by email so we can investigate it?

Regards,
ARI Soft

After inserting {$id} into Template Parameter, the articles stopped showing and only the articles ID's I inserted at the backend are now showing beside the book.

Module settings screen shot and link to pages sent by email. I could not attach the screen shots here.

Thanks for your prompt response.

The mail has now been sent. Two mails were sent. The latest is correcting the earlier password given.

Thanks a lot.

I have now used {$introtext}. Please check the home page and see how the book has turned out.

I can give temporary access to Joomla backend if required.

Thank you very much for your prompt assistance.

What browser do you use? It looks fine in FireFox for us:
