
Images order

Posted by nehemia - 2013/10/07 07:00

Hi,

I've got a book that is 25 pages long. The pages are images which are numbered from 1-25. For some reason the module displayed the pages in the following order: 1-10-11...18-19-2-20-21...24-25-3-4...

The ordering is set to "By file name".

I know there's a way to arrange the files via CSV but couldn't find the file or instructions on how to do it.

How should I rename my files so that they will load in the correct order?

Regards,

=====

Hello,

Download and upgrade the module. New version of the extension uses natural sorting when images are sorted by file name.

Hi,

I've checked and the version I got is 1.7.0

We bought the module yesterday. I presumed you've sent us a download link to the latest version.

Or did I presume wrong?

The latest version is 1.7.1. It is available in "Member Area".

PS: We updated the module after your post.

Hi,

Downloaded the latest version:

1. The problem was NOT solved.

2. Changes which I've made to the design in order to feed to my images was lost.

3. Now when I try to set ordering via "File Name" I get the following message "Warning: ksort() expects parameter 2 to be long, string given in

/home/www/chironlp.com/modules/mod_ariflipbook/includes/kernel/Module/Providers/class.ThumbnailProvider.php on line 236"

2. If core extension's files were modified, changes will be lost after an upgrade. Joomla! installer doesn't merge changes.

1 and 3. It works fine on our test server. Could you send a link to a page where we can see the problem and a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft

Previous update requires PHP v. 5.4+, it seems lower PHP version is installed on your server so we modified the module and now it works with previous PHP versions too. Download and upgrade the module again please.
