
Problem in images

Posted by augustocfelix - 2013/12/10 13:49

Hello!

I try to configure my Flip Book, but it appear like the image attached.
I am using joomla 3.x

I made this steps:

- 1) create a module: flip book.
- 2) insert a name.
- 3) change the source type to Image.
- 4) especify the folder tha contains the images.
- 5) change the Theme to Moleskine.

Then I enter in my article (<http://www.frutosatrativosdocerrado.bio.br/links>) and insert this code line:
{ariflipbook moduleId="135"}

The Id of my module is 135.

But it doesn't work properly. What can I do?

Thanks!

Hello,

This problem with "slprettyphoto" plugin. It doesn't use jQuery copy which is included into Joomla! and cause javascript conflicts.

Regards,
ARI Soft

And what should I do? Uninstall slprettyphoto? There is another way?

If "slprettyphoto" supports ability to disable loading of jQuery library, disable it. If not, the problem can be solved with help a 3rd party extension like "JS Plant".

PS: We can help to configure extensions, if you provide a temporary access to your J! backend by email.
