Hello,

It seems the module can't load jQuery javascript library. It can happen if "Include jQuery" parameter is set to "No" or if plugin which is used on your site for optimization loading of CSS and javascript files can't work with external files (the module loads jQuery through Google AJAX libraries API). Provide temporary access to your Joomla! backend by email please that we can investigate this problem in more details.

Regards,  
ARI Soft

Try now please. It was a problem with Gantry optimizator of loading javascript and CSS files. It can't work with external files. We created "System - ARI jQuery Integrator" plugin and installed it on your site that avoid this problem.

Hello,

Could you provide a link to a page where we can see a problem?

Regards,  
ARI Soft
