## Download button?

Posted by ottovdv - 2011/08/14 21:59

---

Great plugin, easy to use, and works in joomla 1.7 perfectly!  
Especially the width=100% switch I like a lot.

I use it mainly to view pdf's inside my website, that are stored on my server.

The only thing I miss is a "Download" button/link (like the similar plugin 'edocs' has).

Hello,

Do you use Zoho or Google engine for embedding PDF files?

Hello,

I use the Google viewer...

One more thing, when I activate the download button, the height of the article doubles in size:

I use Ari Docs Viever to view pdf files in 100% width x 400px height, but when I activate the button, it shows 800px height, with the bottom 400 blanco (under the download button). <http://www.ari-soft.com/images/fbfiles/images/aridoc.JPG>

Thanks, what a great service for a free plugin!

Works perfect now!
